

LA-1500

ELECTRIC LOCK CURRENT AMPLIFIER MODEL LA-1500

LA-1500 current amplifier can be used at any electric lock or electric strike.

By installing LA-1500 we ensure that the current for the opening of the door through the intercom is amplified.

The advantage from other similar systems is that it can issue a command to the electric lock even if the power supply voltage is 9 Vdc duo to voltage drop from the cabling of the installations.

LA-1500 amplifies the current at opening up to 5A.

It protects the coil of the electric lock from continuous commands issued from the intercom either by malfunction or by needless use.

LA-1500 is installed in series with the electric lock easily without the need of other customizations or alteration of the existing intercom installation.
